

Vidar Hagen

There's always room for improvement and optimisation. Performance specialist Vidar will figure out how.

His many years working with Roxar, Elotec, Kabel-partner, Sense Offshore and the Norwegian armed forces, has earned Vidar a deep understanding of the industry and invaluable expert knowledge of standards, testing, production and product lifecycle management.

Meticulous and thorough, Vidar is sharply focused on doing things as smart and efficient as possible, maximizing performance and output while minimizing costs in all aspects of design and production.

"I like creating things, and making things simpler, better, reusable. What's so great here at Embida is that everything we do is founded on insight and knowledge", says Vidar.

When not busy figuring out how to improve and optimize things in the embedded industry, Vidar likes to be a good father and husband, play the guitar, ride motorbike, build stuff out of wood (such as houses) and stay in shape by bicycling and running and skiing. Doing a full-length marathon is an achievable stretch goal, he figures.

CORE COMPETENCE

Electronics engineering

Subsea Instrumentation, ESS testing

Industrialization, Product lifecycle management and cost optimization

EDUCATION

Bachelor's degree in electronics, Various additional courses, ex, surge protection, C#

VIDARS LATEST PROJECTS

Dolphitech

Dolphicam II Ultrasound instrument.
